APPENDIX N.2 – ATTACHMENT 2
DATA REVIEW AND VALIDATION REPORTS

Facility:	EPA, Region 9
Event:	PV Shelf - Sediment (2013 Baseline)
Guidance Document:	Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California
Contract Laboratory:	CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA
Field Contractor:	Innovative Technical Solutions, Inc., Walnut Creek, CA
Data Review Contractor:	Veridian Environmental, Inc.
SDG:	15021743-020420161811, Certified - 2/4/2016 by chollowell
QC Level:	S3VEM
Project Manager:	Robert Lindfors
Data Reviewer:	Tracy Young
Data Reviewer Title:	Senior Chemist
Date of Review Report:	February 02, 2016
Second Reviewer:	Rachel Jesinger
Completion Date of Second Reviewer:	February 12, 2016

Analytical Method/ Leach Method	Normal Soil Samples	Field QC Soil Samples

SW9060/NONE	8	

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021743-020420161811. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
LCS Recovery
MS Recovery
MS RPD
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative
Continuing Calibration Verification
Equipment Blank
Field Blank
Field Duplicate RPD
Initial Calibration Verification
Lab Replicate RPD
Material Blank
Negative Blank
Trip Blank

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 439 results (100.00%) out of the 439 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include four individual samples and four composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18°C after collection. The sediment samples were collected on 11/21/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Analytical Method	Comment
A2540B	Client Sample ID BA10C01201301 could not be analyzed for Total Solids due to insufficient sample volume.

Reason Code Definitions

Code	Definition
H1	Test Hold Time
H2	Prep Hold Time
M	Matrix spike recovery was outside established criteria.
TR	Trace Level Detect
X2	Qualified due to professional judgment, see data validation narrative.

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

Review Questions	Yes	No	NA	Comment
Stage 3 Review: COC - Custody Trail?	•			
Stage 3 Review: COC - Temperature/Condition?	•			
Stage 3 Review: COC - Receipt anomalies?	•			See SDG Comment.
Stage 3 Review: COC - Sample/Methods checked?	•			
Stage 3 Review: Case Narrative - Anomalies?	•			See Test Method Comment. All samples analyzed outside of holding time. A sample from a different SDG was used for the laboratory replicate.
Stage 3 Review: Samples - Collection date?	•			11/21/2013
Stage 3 Review: Samples - Extraction date?			•	
Stage 3 Review: Samples - Analysis date?	•			9/16/2013
Stage 3 Review: Samples - Holding time?		•		The holding time exceeded project criteria of 180 days. The associated results are estimated with a potential low bias (J-).
Stage 3 Review: Samples - Batching?	•			F0916TSB1 / F0916TSD1
Stage 3 Review: Samples - Lab qualifiers?			•	
Stage 3 Review: Calibration - Oven Temp Start?	•			
Stage 3 Review: Calibration - Oven Temp End?	•			
Stage 3 Review: Calibration - Balance Calibration Check?	•			
Stage 3 Review: Blank - Method blank?	•			ND
Stage 3 Review: Precision/Accuracy - Lab Replicate?			•	The Laboratory Replicate was performed on a sample from a different SDG. Consequently, an assessment of precision and accuracy cannot be made.
Stage 3 Review: Quantitation - PQLs?	•			
Stage 3 Review: Quantitation - Results (i.e. correct analytes)?		•		The analytical report summary sheet reports the results on a dry weight basis. The raw data and EDD report on a wet weight basis.
Stage 3 Review: Field Duplicates - RPD within limits?			•	No field duplicates.
Stage 3 Review: Quantitation - Calculation Check (raw data)?	•

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021744-020420161829. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Lab Replicate RPD
LCS Recovery
MS Recovery
MS RPD
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative
Continuing Calibration Verification
Equipment Blank
Field Blank
Field Duplicate
Initial Calibration Verification
Material Blank
Negative Blank
Trip Blank

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 715 results (100.00%) out of the 715 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include four individual samples and nine composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18°C after collection. The sediment samples were collected on 11/21/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

On the Sample Summary page, the collection date & time for Client Sample ID BA9DC01201309 is incorrectly written as 01/21/2013 09:04 rather than 11/21/2013 09:04. The remainder of the report has the correct date of 11/21/2013. No impact to data quality.

Analytical Method	Comment
A2540B	No additional comments; see Checklist for detail.
BNASIM	No additional comments; see Checklist for detail.
PCBSIM	Test comment
SW9060	No additional comments; see Checklist for detail.

Reason Code Definitions

Code	Definition
H1	Test Hold Time
H2	Prep Hold Time
L	Percent recovery of laboratory control sample recovery was outside established limits
M	Matrix spike recovery was outside established criteria.
S	Surrogate recovery out of criteria (upper or lower limit)
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

Review Questions	Yes	No	NA	Comment
Stage 2 Review: COC - Custody Trail?	•			
Stage 2 Review: COC - Temperature/Condition?	•			
Stage 2 Review: COC - Receipt anomalies?	•			See SDG Comment.
Stage 2 Review: COC - Sample/Methods checked?	•			
Stage 2 Review: Case Narrative - Anomalies?	•			All samples analyzed outside of holding time. A sample from another SDG was used for the MS/MSD analysis in QC Batch 150910S02.
Stage 2 Review: Samples - Collection date?	•			11/21/2013
Stage 2 Review: Samples - Extraction date?	•			09/09/2015 and 09/10/2015
Stage 2 Review: Samples - Analysis date?	•			09/11/2015, 09/12/2015, and 09/15/2015
Stage 2 Review: Samples - Holding time?		•		Holding time exceeded project criteria, but samples were extracted and analyzed within 2x holding time. The associated samples are estimated with a potential low bias (J-/UJ).
Stage 2 Review: Samples - Batching?	•			150909L02 / 150909S02 and 150910L02 / 150910S02
Stage 2 Review: Samples - Surrogate recoveries?		•		Client Sample ID BA9DC01201317-19: The surrogate recoveries are incorrectly reported on the Analytical Report and the client Environmental Data Management System (eDMS) portal as %R= 174% / 173% for 2-fluorobiphenyl / p-terphenyl-d14. The surrogate recoveries were confirmed by the laboratory and are reported correctly on the Surrogate Recovery summary page in the raw data as %R= 87% / 87% for 2-fluorobiphenyl / p-terphenyl-d14. The recoveries meet criteria and qualification of the data is not warranted. Upon instructions from the client, the data qualifiers were corrected in the client eDMS portal. See QC Outlier Report for %R corrected for wet weight reporting of spike recoveries. Client Sample ID BA9DC01201341-43: High surrogate %R= 143% / 144% for 2-fluorobiphenyl / p-terphenyl-d14. Associated detected results are qualified as estimated with a potential high bias (J+). Laboratory Sample ID MB 099-16-418-99 (QC Batch 150909L02): High %R= 143% for p-terphenyl-d14. MS of Client Sample ID BA9DC01201313-15 (QC Batch 150909S02): High %R= 135% / 137% for 2-fluorobiphenyl / 137% p-terphenyl-d14. No qualification warranted on QC samples.
Stage 2 Review: Samples - Lab qualifiers?	•			J-Flag: Result >= MDL, <= RL.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021745-020420161829. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
LCS Recovery
MS Recovery
MS RPD
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative
Continuing Calibration Verification
Equipment Blank
Field Blank
Field Duplicate RPD
Initial Calibration Verification
Lab Replicate RPD
Material Blank
Negative Blank
Trip Blank

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 440 results (100.00%) out of the 440 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include four individual samples and four composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18°C after collection. The sediment samples were collected on 11/20/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Reason Code Definitions

Code	Definition
D2	MS RPD exceeded established criteria.
H1	Test Hold Time
H2	Prep Hold Time
M	Matrix spike recovery was outside established criteria.
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

Stage 2 Review: Precision/Accuracy - MS/MSD?		•		QC Batch 150909S03, Client Sample BA7BC01201313-15: See QC Outlier Report for %R corrected for wet weight reporting of spike recoveries. Very low recoveries of < 10% were noted in the following analytes: MSD %R for 4,4'-DDMU of 0% and MS/MSD %R for 4,4'-DDE of 6% / 0%. Associated detected results qualified as estimated with a potential low bias (J-). Low recoveries were noted in the following analytes: MS %R for 4,4'-DDMU of 17%, MSD %R for 4,4'-DDT of 24% and 2,4'-DDE of 46%; MS/MSD %R for 4,4'-DDNU of 46%/40%. Associated detected results qualified as estimated with a potential low bias (J-). High RPD of 31% for 4,4'-DDT was noted. Associated results qualified as estimated (J/UJ).

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021746. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Lab Replicate RPD
LCS Recovery
MS Recovery
MS RPD
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative
Continuing Calibration Verification
Equipment Blank
Field Blank
Field Duplicate
Initial Calibration Verification
Material Blank
Negative Blank
Trip Blank

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 1045 results (100.00%) out of the 1045 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include four individual samples and 15 composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative. The holding time for all test methods exceeded project criteria of one year if stored frozen at -18°C after collection. The sediment samples were collected on 11/20/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Analytical Method	Comment

Reason Code Definitions

Code	Definition
H1	Test Hold Time
H2	Prep Hold Time
L	Percent recovery of laboratory control sample recovery was outside established limits
M	Matrix spike recovery was outside established criteria.
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

Review Questions

Method: A2540B

Review Questions	Yes	No	NA	Comment
Stage 2 Review: COC - Custody Trail?	•			
Stage 2 Review: COC - Temperature/Condition?	•			
Stage 2 Review: COC - Receipt anomalies?	•			See SDG comment.
Stage 2 Review: COC - Sample/Methods checked?	•			
Stage 2 Review: Case Narrative - Anomalies?	•			All samples analyzed outside of holding time.
Stage 2 Review: Samples - Collection date?	•			11/20/2013
Stage 2 Review: Samples - Extraction date?			•	
Stage 2 Review: Samples - Analysis date?	•			09/16/2015
Stage 2 Review: Samples - Holding time?		•		The holding time exceeded project criteria of 180 days. The associated results are estimated with a potential low bias (J-).
Stage 2 Review: Samples - Batching?	•			F0916TSB3 / F0916TSD3
Stage 2 Review: Samples - Lab qualifiers?		•		
Stage 2 Review: Calibration - Oven Temp Start?	•			
Stage 2 Review: Calibration - Oven Temp End?	•			
Stage 2 Review: Calibration - Balance Calibration Check?	•			
Stage 2 Review: Blank - Method blank?	•			ND
Stage 2 Review: Precision/Accuracy - Lab Replicate?	•			QC Batch F0916TSD3: The Laboratory Replicate for Client Sample ID BA7C01201303 met criteria.
Stage 2 Review: Quantitation - PQLs?	•			
Stage 2 Review: Quantitation - Results (i.e. correct analytes)?	•			
Stage 2 Review: Field Duplicates - RPD within limits?			•	No field duplicates.

Review Questions

Method: BNASIM

Review Questions	Yes	No	NA	Comment
Stage 2 Review: COC - Custody Trail?	•			
Stage 2 Review: COC - Temperature/Condition?	•			
Stage 2 Review: COC - Receipt anomalies?	•			See SDG comments.
Stage 2 Review: COC - Sample/Methods checked?	•			
Stage 2 Review: Case Narrative - Anomalies?	•			All samples analyzed outside of holding time. Client Sample ID BA7C01201329-31 was used for the MS/MSD. MS/MSD percent recoveries were outside control limits for all target pesticides. The surrogate recovery for the reanalysis of Client Sample ID BA7C01201333-35 was outside of control limits.
Stage 2 Review: Samples - Collection date?	•			11/20/2013
Stage 2 Review: Samples - Extraction date?	•			09/10/2015
Stage 2 Review: Samples - Analysis date?	•			09/25/2015, 09/26/2015, 09/28/2015, and 09/29/2015
Stage 2 Review: Samples - Holding time?		•		Holding time exceeded project criteria, but samples were extracted and analyzed within 2x holding time. The associated samples are qualified as estimated with a potential low bias (J-/UJ).
Stage 2 Review: Samples - Batching?	•			150910L01 / 150910S01
Stage 2 Review: Samples - Surrogate recoveries?		•		Client Sample ID BA7C01201333-35 was analyzed at a 100x dilution. The surrogate was diluted out and not evaluated.
Stage 2 Review: Samples - Lab qualifiers?	•			J-Flag: Result >=MDL, <= RL
Stage 2 Review: Samples - Internal Standard recoveries?	•			
Stage 2 Review: Calibration - ICAL?	•			
Stage 2 Review: Calibration - ICV?	•			
Stage 2 Review: Calibration - CCV?	•			
Stage 2 Review: Blank - Method blank?	•			ND
Stage 2 Review: Blank - Equipment blank?			•	
Stage 2 Review: Instrument - Tune?	•			
Stage 2 Review: Instrument - Breakdown Standard?			•	
Stage 2 Review: Precision/Accuracy - Lab Replicates?			•	

Review Questions

Method: BNASIM

Review Questions	Yes	No	NA	Comment
Stage 2 Review: Precision/Accuracy - MS/MSD?		•		QC Batch 150910S01, Client Sample ID BA7C01201329-31: For 2,4'-DDE, 4,4'-DDD, 4,4'-DDE, and 4,4'-DDMU, the sample concentrations are greater than four times the spike concentrations so precision and accuracy could not be evaluated for these analytes. Very low MS/MSD %R = 0% / 0% for 4,4'-DDT. Associated results are all detected and qualified as estimated with a potential low bias (J-). Very low MSD %R = 9% for 4,4'-DDNU. Associated results are all detected and qualified as estimated with a potential low bias (J-). High MS/MSD %R = 620% / 421% for 2,4'-DDD and 331% / 250% for 2,4'-DDT. Associated detected results are qualified as estimated with a potential high bias (J+). See QC Outlier Report for %R corrected for wet weight reporting of spike recoveries.
Stage 2 Review: Precision/Accuracy - LCS/LCSD?	•			
Stage 2 Review: Quantitation - PQLs?	•			
Stage 2 Review: Quantitation - Dilution Factor?	•			The following Client Sample IDs were analyzed at dilutions in order to appropriately quantitate the target compounds with the highest concentrations: BA7C01201303: 5x, BA7C01201305: 5x, BA7C01201307: 5x, BA7C01201313-15: 5x, BA7C01201317-19: 5x, BA7C01201321-23: 10x, BA7C01201325-27: 10x, BA7C01201329-31: 10x and 100x, BA7C01201333-35: 10x and 100x, BA7C01201337-39: 10x and 100x, BA7C01201341-43: 10x and 100x, BA7C01201345-47: 10x and 100x, BA7C01201349-51: 10x and 100x; and BA7C01201353-55: 10x.
Stage 2 Review: Quantitation - Results (i.e. correct analytes, RTs)?	•			
Stage 2 Review: Quantitation - Column/Detector RPD?			•	
Stage 2 Review: Field Duplicates - RPD within limits?			•	No field duplicates.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021747-020420161830. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Lab Replicate RPD
LCS Recovery
MS Recovery
MS RPD
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative
Continuing Calibration Verification
Equipment Blank
Field Blank
Field Duplicate
Initial Calibration Verification
Material Blank
Negative Blank
Trip Blank

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 715 results (100.00%) out of the 715 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include four individual samples and nine composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18C after collection. The sediment samples were collected on 11/21/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Reason Code Definitions

Code	Definition
H1	Test Hold Time
H2	Prep Hold Time
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021748-020420161831. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Lab Replicate RPD
LCS Recovery
MS Recovery
MS RPD
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative
Continuing Calibration Verification
Equipment Blank
Field Blank
Field Duplicate RPD
Initial Calibration Verification
Material Blank
Negative Blank
Trip Blank

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 550 results (100.00%) out of the 550 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include four individual samples and six composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18°C after collection. The sediment samples were collected on 11/21/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Reason Code Definitions

Code	Definition
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
H1	Test Hold Time
H2	Prep Hold Time
M	Matrix spike recovery was outside established criteria.

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

Stage 2 Review: COC - Sample/Methods checked?	•			
Stage 2 Review: Case Narrative - Anomalies?	•			All samples analyzed outside of holding time. A project sample from another SDG was used for the MS/MSD in QC Batch F0916TOCS2.
Stage 2 Review: Samples - Collection date?	•			11/21/2013
Stage 2 Review: Samples - Extraction date?			•	
Stage 2 Review: Samples - Analysis date?	•			09/16/2015
Stage 2 Review: Samples - Holding time?		•		Holding time exceeded project criteria, but samples were analyzed within 2x holding time. The associated samples are qualified as estimated with a potential low bias (J-).
Stage 2 Review: Samples - Batching?	•			F0916TOCL1 / F0916TOCS2 and F0916TOCL3 / F0916TOCS4
Stage 2 Review: Samples - Lab qualifiers?		•		
Stage 2 Review: Calibration - ICAL?	•			
Stage 2 Review: Calibration - ICV?	•			
Stage 2 Review: Calibration - CCV?		•		In Batch F0916TOCL1, a very high CCV recovery of 148.52% for total organic carbon analyzed on 09/16/2015 was noted (above the UCL of 130%). Associated results are qualified as estimated with a potential high bias (J+).
Stage 2 Review: Blank - Method blank?	•			ND
Stage 2 Review: Blank - Calibration Blanks?	•			
Stage 2 Review: Blank - Equipment blank?			•	
Stage 2 Review: Precision/Accuracy - MS/MSD?		•		QC Batch F0916TOCS2: A sample from another SDG was used for the MS/MSD. The LCS was performed in duplicate to provide precision and accuracy for this batch.QC Batch F0916TOCS4: Client Sample BA9C01201325-27 was used for the MS/MSD. The recoveries and RPD were within project criteria. Since all of the samples in this SDG represent a single sediment core, the MS/MSD sample is representative of all batches in this SDG.
Stage 2 Review: Precision/Accuracy - LCS/LCSD?	•			
Stage 2 Review: Precion/Accuracy - Lab Replicates?			•	
Stage 2 Review: Quantitation - PQLs?	•			
Stage 2 Review: Quantitation - Dilution Factor?			•	No dilutions.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021749-020420161831. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Lab Replicate RPD
LCS Recovery
MS Recovery
MS RPD
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative
Continuing Calibration Verification
Equipment Blank
Field Blank
Field Duplicate RPD
Initial Calibration Verification
Material Blank
Negative Blank
Trip Blank

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 550 results (100.00%) out of the 550 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include five individual samples and five composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18C after collection. The sediment samples were collected on 11/18/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Reviewed by Rachel Jesinger, QC Chemist

Reason Code Definitions

Code	Definition
D2	MS RPD exceeded established criteria.
H1	Test Hold Time
H2	Prep Hold Time
M	Matrix spike recovery was outside established criteria.
S	Surrogate recovery out of criteria (upper or lower limit)
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021750-020420161832. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Lab Replicate RPD
LCS Recovery
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative
Continuing Calibration Verification
Equipment Blank
Field Blank
Field Duplicate RPD
Initial Calibration Verification
Material Blank
MS Recovery
MS RPD
Negative Blank
Trip Blank

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 605 results (100.00%) out of the 605 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include five individual samples and six composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18C after collection. The sediment samples were collected on 11/21/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Reason Code Definitions

Code	Definition
H1	Test Hold Time
H2	Prep Hold Time
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

Review Questions

Method: BNASIM

Review Questions	Yes	No	NA	Comment
Stage 3 & 4 Review: Quantitation - Dilution Factor?	•			The following Client Sample IDs were analyzed at dilutions in order to appropriately quantitate the target compounds with the highest concentrations:BA9BC01201301: 5x,BA9BC01201303: 5x, BA9BC01201305: 10x, BA9BC01201307: 10x, BA9BC01201309-11: 10x, BA9BC01201313-15: 10x, BA9BC01201317-19: 10x, BA9BC01201321-23: 10x, and BA9BC01201325-27: 5x.
Stage 3 & 4 Review: Quantitation - Results (RT, Ions, Rel. Itens.)?	•			
Stage 3 & 4 Review: Quantitation - Retention times?	•			
Stage 3 & 4 Review: Quantitation - Major ions present?	•			
Stage 3 & 4 Review: Quantitation - Relative intensities?	•			
Stage 3 & 4 Review: Quantitation - Column/Detector RPD?			•	
Stage 3 & 4 Review: Quantitation - Confirmation?	•			
Stage 3 & 4 Review: Quantitation - Result recalculation?	•			
Stage 3 & 4 Review: Field Duplicates - RPD within limits?			•	No field duplicates.
Stage 4 Review: Reviewed Chromatograms/Spectra?	•			As noted on the raw analytical data, the ratios for some secondary ions for various analytes are outside lab control limits. Per Calscience SOP-M404, Revision No. 4.9 (2015-03-09), Section 14.8.4, quantitation is based on the abundance of the primary characteristic ion, so qualification of the data is not warranted on this basis.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021751-020420161832. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Lab Replicate RPD
LCS Recovery
MS Recovery
MS RPD
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative
Continuing Calibration Verification
Equipment Blank
Field Blank
Field Duplicate RPD
Initial Calibration Verification
Material Blank
Negative Blank
Trip Blank

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 550 results (100.00%) out of the 550 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include five individual samples and six composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18C after collection. The sediment samples were collected on 11/21/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Reason Code Definitions

Code	Definition
H1	Test Hold Time
H2	Prep Hold Time
M	Matrix spike recovery was outside established criteria.
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

Review Questions

Method: BNASIM

Review Questions	Yes	No	NA	Comment
Stage 2 Review: COC - Custody Trail?	•			
Stage 2 Review: COC - Temperature/Condition?	•			
Stage 2 Review: COC - Receipt anomalies?	•			See SDG Comment.
Stage 2 Review: COC - Sample/Methods checked?	•			
Stage 2 Review: Case Narrative - Anomalies?	•			All samples analyzed outside of holding time. Project samples from other SDGs were used for the MS/MSD in Batches 150910S03 and 150916S01.
Stage 2 Review: Samples - Collection date?	•			11/21/2013
Stage 2 Review: Samples - Extraction date?	•			09/10/2015 and 09/16/2015
Stage 2 Review: Samples - Analysis date?	•			09/29/2015 and 09/30/2015
Stage 2 Review: Samples - Holding time?		•		Holding time exceeded project criteria, but samples were extracted and analyzed within 2x holding time. The associated samples are qualified as estimated with a potential low bias (J-/UJ).
Stage 2 Review: Samples - Batching?	•			150910L03 / 150910S03 and 150916L01 / 150916S01
Stage 2 Review: Samples - Surrogate recoveries?	•			
Stage 2 Review: Samples - Lab qualifiers?	•			J-Flag: Result >= MDL, <= RL.
Stage 2 Review: Samples - Internal Standard recoveries?	•			
Stage 2 Review: Calibration - ICAL?	•			
Stage 2 Review: Calibration - ICV?	•			
Stage 2 Review: Calibration - CCV?	•			
Stage 2 Review: Blank - Method blank?	•			ND
Stage 2 Review: Blank - Equipment blank?			•	
Stage 2 Review: Instrument - Tune?	•			
Stage 2 Review: Instrument - Breakdown Standard?			•	
Stage 2 Review: Precision/Accuracy - Lab Replicates?			•	
Stage 2 Review: Precision/Accuracy - MS/MSD?			•	The MS/MSD analyses were performed on project samples from other SDGs. Consequently, an assessment of matrix affects cannot be made. The LCS was performed in duplicate to provide accuracy and precision for the batches.
Stage 2 Review: Precision/Accuracy - LCS/LCSD?	•			
Stage 2 Review: Quantitation - PQLs?	•			

Review Questions

Method: BNASIM

Review Questions	Yes	No	NA	Comment
Stage 2 Review: Quantitation - Dilution Factor?	•			The following Client Sample ID was analyzed at a dilution in order to appropriately quantitate the target compound with the highest concentration: BA10B01201309-11: 4,4'-DDE at 5x.
Stage 2 Review: Quantitation - Results (i.e. correct analytes, RTs)?	•			
Stage 2 Review: Quantitation - Column/Detector RPD?			•	
Stage 2 Review: Field Duplicates - RPD within limits?			•	No field duplicates.

Stage 2 Review: Samples - Holding time?		•		Holding time exceeded project criteria, but samples were extracted and analyzed within 2x holding time. The associated samples are qualified as estimated with a potential low bias (J-).
Stage 2 Review: Samples - Batching?	•			F0918TOCL1 / F0918TOCS1 and F0918TOCL2 / F0918TOCS2
Stage 2 Review: Samples - Lab qualifiers?		•		
Stage 2 Review: Calibration - ICAL?	•			
Stage 2 Review: Calibration - ICV?	•			
Stage 2 Review: Calibration - CCV?	•			
Stage 2 Review: Blank - Method blank?	•			ND
Stage 2 Review: Blank - Calibration Blanks?	•			
Stage 2 Review: Blank - Equipment blank?			•	
Stage 2 Review: Precision/Accuracy - MS/MSD?	•			QC Batch F0918TOCS2, Client Sample ID BA10B01201307: MS/MSD recoveries and RPD met project criteria. See QC Outlier Report for %R corrected for wet weight reporting of spike recoveries. Since all of the samples in this SDG represent a single sediment core, the MS/MSD sample is representative of all batches in this SDG. QC Batch F0918TOCS1: A sample from another SDG was used for the MS/MSD. The LCS was performed in duplicate to provide precision and accuracy for this batch.
Stage 2 Review: Precision/Accuracy - LCS/LCSD?	•			LCS only for QC Batch F0918TOCL2
Stage 2 Review: Precion/Accuracy - Lab Replicates?			•	
Stage 2 Review: Quantitation - PQLs?	•			
Stage 2 Review: Quantitation - Dilution Factor?			•	No dilutions.
Stage 2 Review: Quantitation - Results (i.e. correct analytes)?	•

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021752-020420161833. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Lab Replicate RPD
LCS Recovery
MS Recovery
MS RPD
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative
Continuing Calibration Verification
Equipment Blank
Field Blank
Field Duplicate RPD
Initial Calibration Verification
Material Blank
Negative Blank
Trip Blank

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 935 results (100.00%) out of the 935 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include five individual samples and six composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18C after collection. The sediment samples were collected on 11/21/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Reason Code Definitions

Code	Definition
D2	MS RPD exceeded established criteria.
H1	Test Hold Time
H2	Prep Hold Time
M	Matrix spike recovery was outside established criteria.
S	Surrogate recovery out of criteria (upper or lower limit)
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021753-020420161833. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
LCS Recovery
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative
Continuing Calibration Verification
Equipment Blank
Field Blank
Field Duplicate RPD
Initial Calibration Verification
Lab Replicate RPD
Material Blank
MS Recovery
MS RPD
Negative Blank
Trip Blank

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 605 results (100.00%) out of the 605 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include five individual samples and five composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18°C after collection. The sediment samples were collected on 11/21/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021754-020420161834. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Lab Replicate RPD
LCS Recovery
MS Recovery
MS RPD
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative
Continuing Calibration Verification
Equipment Blank
Field Blank
Field Duplicate
Initial Calibration Verification
Material Blank
Negative Blank
Trip Blank

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 605 results (100.00%) out of the 605 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include five individual samples and twelve composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18C after collection. The sediment samples were collected on 11/21/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Reason Code Definitions

Code	Definition
D2	MS RPD exceeded established criteria.
H1	Test Hold Time
H2	Prep Hold Time
M	Matrix spike recovery was outside established criteria.
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

Review Questions

Method: BNASIM

Review Questions	Yes	No	NA	Comment
Stage 2 Review: Precision/Accuracy - MS/MSD?		•		QC Batch 150916S03, Client Sample ID BA3B01201309-11. For 4,4'-DDE, the sample concentration is greater than four times the spike concentration so precision and accuracy could not be evaluated for this analyte. Low MS/MSD %R = 35%/17% for 4,4'-DDNU. Associated results are qualified as estimated with a potential low bias (J-/UJ). High MS %R = 203% for 4,4'-DDT. Associated detected results are qualified as estimated with a potential high bias (J+). Since all of the samples in this SDG represent a single sediment core, the MS/MSD sample is representative of all batches in this SDG. See QC Outlier Report for %R corrected for wet weight reporting of spike recoveries. A high RPD of 53% for 4,4'-DDT was also noted in QC Batch 150916S03. The associated results are qualified as estimated (J/UJ). QC Batch 150916S05: A sample from another SDG was used for the MS/MSD. The LCS was performed in duplicate to provide precision and accuracy for this batch.
Stage 2 Review: Precision/Accuracy - LCS/LCSD?	•			
Stage 2 Review: Quantitation - PQLs?	•			
Stage 2 Review: Quantitation - Dilution Factor?	•			The following Client Sample IDs were analyzed at dilutions in order to appropriately quantitate the target compounds with the highest concentrations: BA3B01201303: 4,4'-DDE, 4,4'-DDMU at 10x, BA3B01201305: 4,4'-DDE, 4,4'-DDMU at 10x, BA3B01201307: 4,4'-DDE, 4,4'-DDMU at 10x, and BA3B01201309-11: 4,4'-DDE at 2x.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021760. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Lab Replicate RPD
LCS Recovery
MS Recovery
MS RPD
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative
Continuing Calibration Verification
Equipment Blank
Field Blank
Field Duplicate
Initial Calibration Verification
Material Blank
Negative Blank
Trip Blank

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 1320 results (100.00%) out of the 1320 results (sample and field QC samples) reported are qualified based on review and 5 results (0.38%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include four individual samples and seven composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18°C after collection. The sediment samples were collected on 11/21/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Reason Code Definitions

Code	Definition
D2	MS RPD exceeded established criteria.
H1	Test Hold Time
H2	Prep Hold Time
L	Percent recovery of laboratory control sample recovery was outside established limits
M	Matrix spike recovery was outside established criteria.
S	Surrogate recovery out of criteria (upper or lower limit)
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
